Application/Control Number: 10/020,697

Art Unit: 2192

1. This paper is in response to Applicants' filing Appeal brief on 8/17/05. Claims 5, 10, and 15 have been allowed as indicated in the prior advisory action. The Claims 1-4, 6-9, 11-14 were rejected by the prior art of record, Teoman et al (US No. 6,370,614 B1).

Teoman discloses a method using a configurable preload cache for accessing and caching software such as driver objects. In order to perform accessing and caching, Teoman's FIG. 6 shows file 15 and driver objects are used in preloading process. When the file 15 is first opened for access, an I/O manager instantiates a file object 105 (preload object) in system memory to represent the file 15. The attributes in the file object are pointed to a driver object and File 15 in a mass storage. Checking data integrity is also done periodically in association with preloading. To further detail how the data (FILE 15) and driver objects can be compared, Teoman picks a portion DRIVER OBJECT 109 and USER CACHE DRIVER 45 in FIG. 6, where Teoman describes, "access packet 114 that include a handle to the file object and values indicating the amount of data to be accessed" (Column 12, lines 2-4), and "The user cache driver 45 compares the blocks indicated by the access packet 114 to the directory of the user cache 25" (column 12, lines 18-21). Teoman is the closest art of record that discloses the functionality as mentioned above. However, Applicants appeal and argue that Teoman's teaching of comparing is not the same as comparing attributes of a software element object with attributes of a preload object (Brief: p. 6).

Reasons for Allowance

2. Claims 1-15 are allowed.

Applicants points out comparing of data in user cache against the corresponding data in the mass storage data is not the same as comparing attributes of a software element object with attributes of a preload object (Brief: p. 6). Therefore, the following is an examiner's statement of reasons for allowance: The cited prior arts taken alone or in combination fail to teach claimed invention comprising at least features,

Application/Control Number: 10/020,697

Art Unit: 2192

"comparing attributes of said one or more software element objects with said one or more attributes of said particular preload object", as recited in such manners in independents Claims 1, 5, 6, 10, 11, 15.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ted T. Vo whose telephone number is (571) 272-3706. The examiner can normally be reached on 8:00AM to 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tuan Q. Dam can be reached on (571) 272-3694.

The facsimile number for the organization where this application or proceeding is assigned is the Central Facsimile number **571-273-8300**.

Any inquiry of a general nature or relating to the status of this application should be directed to the TC 2100 Group receptionist: 571-272-2100. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
